SUMMARY

Product designer with 8 years of experience leading 0 to 1 initiatives and setting product vision in fintech and B2B software. I partner with cross-functional teams to turn ambiguous business goals, complex user data, and regulated financial workflows into design strategy that defines what we build.

SKILLS

UX design
Product strategy
Design strategy
Stakeholder management
Systems thinking
User research
Mobile design
Design systems
Interaction design
Prototyping
Wireframing

TOOLS

Figma
Claude
Sketch
Adobe Creative Suite
UserTesting.com
Miro
Jira
Confluence

EDUCATION

Carnegie Mellon University
BFA in Communication Design
Minor in HCI

EXPERIENCE

Senior Product Designer | Thrivent (Contract via Horizontal Inc)

Jun 2026 - Present

- Leading IA and navigation design for Thrivent's mobile app, evaluating how to consolidate multiple standalone products into one unified experience.
- Establishing a mobile component library with other designers.

Senior Product Designer | Intuit

Jul 2022 - Jul 2025

- Defined QuickBooks' AI-native mobile vision: built prototypes showing how a small business owner uses mobile-native capabilities and AI agents to run their business. The customer agent concept became the next major AI initiative, and leadership allocated 20+ headcount to build the vision.
- Developed a framework to align cross functional stakeholders on which financial pain points to solve first, sequencing the roadmap from foundational needs to higher level growth decisions.
- Redesigned a complex invoice reconciliation flow that required accounting knowledge most users didn't have, replacing it with a simple step where Quickbooks Solopreneur handles the accounting behind the scenes. Increased task completion from 30% (other QuickBooks products) to 82%.
- Led 0→1 design for the money movement domain of QuickBooks Solopreneur, a new web and mobile product now serving 110K+ solopreneurs in the US and UK.
- Led a 2-month longitudinal study that found customer acquisition to be solopreneurs' top unmet need. Surfaced it as a gap in QuickBook's ecosystem, which led leadership to form a dedicated team and add customer acquisition to the roadmap.
- Scaled and governed the QuickBooks mobile design system, established an org-wide contribution process that cut component incorporation time to about 2 weeks, and added 2 new components and 15 new component variants.

Product Designer | Splunk

Feb 2019 - Jun 2022

- Designed interaction patterns for Splunk Cloud Platform's main data grid so non-technical users can search and filter data without writing code.
- Designed app management workflows for Splunk Enterprise, including a pre-install impact check, a custom app vetting pipeline, and maintenance window scheduling so admins can deploy changes without disrupting end users.

UX Designer | SAP

Jun 2017 - Jan 2019

- Selected for SAP's Next Talent Rotational Program, delivering features across multiple product teams including chatbot builder and Ariba.
- Designed a Pay Equity prototype showcased at SuccessConnect, SAP's annual HR conference.
- Facilitated customer-facing design workshops to identify product opportunities and align cross-functional stakeholders.
